

Computer Ethics - Assignment 1

Assignment:

Research into the history of computer ethics and its evolution over time.

Instructions:

1. Begin by researching the origins of computer ethics and its development as a field of study. Consider the social and cultural context in which the field emerged, as well as the key figures and organisations that have been influential in shaping its development.

2. Next, focus on the major ethical issues that have been addressed in computer ethics over the years. This might include issues related to privacy, security, intellectual property, and the impact of technology on society. Consider how these issues have evolved over time and the ways in which they continue to be relevant today.

3. Finally, research the current state of computer ethics and its future prospects. Consider the ongoing debates and controversies in the field, as well as the emerging issues that are likely to shape its development in the coming years.

4. Summarise your findings into a 4 page pdf document , discussing the key points you have learned about the history, evolution, and current state of computer ethics.

5. In your paper, include at least 4 academic sources that you have used in your research and cite them properly in APA format.
